1. She treated me fairly, but I witnessed her treating my classmate unfairly, and even rudely. I was shocked. It seemed out of character for her. She was late responding to my emails, but she wouldn't at least email me back. She did what she could with the time we had, but she didn't exactly follow the syllabus schedule, which threw a few of us off. I really liked her teaching style. She has so much knowledge of the subject and she made class a fun learning environment. I'd recommend her to friends. Awesome personality; very smart. She did a great job for her first time. It was not fair that my lecture/lab were a total of 3 credits. I felt cheated by this. If they went up to at least 4 credits, professors would have enough time to make sure we're learning the material in class, not at home.

2. I liked the professor. I also liked the fact that she was hard working, even though it was her first year teaching. She did an amazing job. The only thing I would ask of her to do is do quizzes differently. The quizzes messed with a lot of people. Not everyone was able to figure out what would be on it.

3. The instructor was very good. I always looked forward to coming to class cause she make it enjoyable and exciting to learn more.

4. I loved this course! Dr. Hennessy was really great and always willing to help explain things if we didn't understand. I would definitely take another class with her.

5. I enjoy Dr. H and her teaching! It sometimes seemed a bit unorganized, but that's okay! Great labs & great learning experience.

6. I didn't always understand the relationships between subject matter in lecture and lab; maybe explain more at the beginning of lab.

7. The lab for this course was a little disorganized. We didn't have quizzes every lab.

8. The course was well organized. In the future, I would suggest the syllabus to match what is expected of the students. As a required course for pre-service teachers, I feel the instructor should have adept social skills and appropriate modelling. Current instructor has become angry unexpectedly at students, has condescended students, and has been heard stating, several times, that she no longer desires to teach; she'd rather be doing research. And, after one semester, she is already done. Her personal feelings were conveyed in her teaching and reflected in her attitude toward her students.

9. I really enjoyed Professor Hennessy. The labs were interesting and interactive, which is awesome. I only wish that the info from lab was more used in lecture, and vice versa. It seemed like the two were a bit disconnected. Overall, I really enjoyed lab, and it definitely made me more comfortable with science experiments.
